ProblemStatement

Many people struggle to manage and track their daily and long-term goals because existing systems are either not secure, too complicated, or do not provide proper authentication and data privacy. Users need a simple and secure backend system where they can store, update, and retrieve their goals easily.

I am

I'm trying to

But

Because

Which makes me feel

I am

I'm trying to

But

Because

Which makes me feel

I am A student

Manage my daily goals

There is no secure system

Most apps are complex

this make me Frustrated and wasted my time

PS ID	I am(Customer)	I'm trying to	But	Because	Which makes me feel
-------	-----------------	---------------	-----	---------	---------------------

PS-1	A student	Managing my daily goals online	There is no simple secure system	Most apps are complex or unsafe	Frustrated
PS-2	A working professional	Track and update my personal goals	Existing system does not protect my data	Authentication is missing or weak	Insecure
PS-3	A beginner developer	Build a goal management backend	Implementing authentication is difficult	JWT and middleware setup is complex	Confused
PS-4	A user	Access my goals anytime	Some systems are not structured properly	Poor backend architecture	Unsatisfied
