SolutionArchitecture

The solution architecture for the **MicroGoals Backend API** ensures a secure, scalable, and structured system for managing user authentication and goal tracking efficiently.

Goals of the Solution Architecture

1 Identify the Best Technical Solution

- Use **Node.js** for server-side runtime.
- Use **Express.js** for building RESTful APIs.
- Use **MongoDB** as a NoSQL database for flexible data storage.
- Use **JWT (JSON Web Token)** for secure authentication.
- Use **Mongoose** for schema modeling and database interaction.
- Use **Thunder Client** for API testing and validation.

This stack ensures lightweight, fast, and scalable backend performance.

Define Structure:-

Solution Architecture - MicroGoals Backend API

Layered architecture with API, security, and data tiers
